KITCHEN Bakeware

INSTRUCTION for Non-stick Bake ware

Non-stick bake ware has a non-stick coating applied, Usually to steel aluminum pans. It scratches easily, and must be handled very carefully to prevent this. Non-stick cleans easily, and the surface will not react with foods. Some experienced bakers find that it heats up too quickly causing the food to dry out. Non-stick surface being dark will absorb heat and conduct it more quickly than light or shiny metal pans. You may need to adjust baking times and temperatures accordingly.

Use and Care Instructions:

- Always place on a baking tray to fill
- Always grease or flour pan
- Leave cake to cool completely in mould before turning out
- Do not use metal tools or knives in mould
- Do not use abrasives or metal scrubbers to clean
- Clean with soapy water and a soft brush only
